

Tiara's Music Site (working title)

1. Introduction

- My project is geared towards musical artists. The goal is for each artist to be able to upload their new work to multiple platforms at once. This site will also serve as a streaming and booking site for people looking to preview new music, and book local artists for upcoming events.

2. User Interface Design and Prototype

- There are going to be 2 separate log in pages. One page will be for consumers to browse the artists pages, listen to their songs, add songs to a playlists and even request to book the artists for their events. The other login page will be for the artists to be able to upload their music and tell us where they want to be uploaded. They will be able to edit their profiles and check their requests. I'd also like a calendar feature to show/remind the artists when they have an event coming up.
- I want my design to be fairly simple. I want the focus to be on the artists and the music so I think my designs will be very very limited.

3. Navigation Structure

- Give a brief overview of the navigation structure for your application. → powerpoint attached
- Briefly indicate a typical flow of your application in terms of user experience. You can use any way of representing the flow. You can also construct a prototype using one of the prototyping tools to illustrate this.

4. References

- Provide any references relevant to the report.
